U. S. Air Service Command

Kelly Workers Past 70 Praised by Col. Laird

Age is indeed providing inspiration for the youth of the land here at the San Antonio Air Technical Service Command.

Col. John A. Laird Jr., commanding officer, revealed this week that a group of 19 workers, all above 70 years of age, are maintaining an attendance record of which they may well be proud.

Said Col. Laird:

"Perhaps the finest tribute that could be paid our 70-year-old workers is to point to their attendance records. Their record of attendance is above that of the average worker. Their loyalty to their jobs may well serve as an inspiration to the youth of the land."

The 19 workers have witnessed the making of a lot of history since their childhood—they were born during the administration of President Ulysses S. Grant and have lived under 14 Presidents of the United States.

Chamberlain is Typical

Clarence G. Chamberlain, who was 72 on January 15, and who works in the Hydraulic Branch of Maintenance, might be regarded as typical of these men who might today be living in quiet retirement if they had not felt impelled to answer their country's wartime summons to duty.

Mr. Chamberlain was a railroad engineer for 47 years. On January 31, 1943, he was compelled to retire because of his age. Two weeks later he was working at Kelly.

Dr. William A. King, who was San Antonio health officer for 30 years, took a post as civilian medical officer at SAATSC in November, 1943, two months after he gave up his city post. Dr. King, 72 years old, summed up his Kelly job this way: "I have a son and a grandson in it, but I want to be in it myself." The "it," of course, is the war.

All native Americans, the stalwart 19 "oldsters" point with pride to their fighting heritage, the 71-year-old John B. Forrest

of Pearsall, Texas, who works in the Engine Repair Branch. He was named for his heroic great-uncle, Confederate General John Bedford Forrest.

Remainder of 19 Listed

The remainder of the 19 are:

Charley L. Cook, Machine Branch of Maintenance, 73, a retired railroad worker; Louis J. Fleming, 72, of Material Branch of Maintenance, also a retired railroad man; Zollie K. Campbell, 71, a Civilian Guard and one-time Texas Ranger; William M. Higdon, 71, a carpenter; Henry L. Hutson, 71, of the Parachute Unit; Arthur E. Juelg, 71, of the Disposal Section of Depot Supply; Patrick V. Maher, 72, of Engine Repair; Allen A. Pearce, 72, of Engine Test Branch of Maintenance.

Also, Byron Smith, 71, of Clothing and Hardware Branch of Supply, who has a daughter and granddaughter both working at Kelly; Joseph O. Smith, 71, of Clothing and Hardware Branch; Bailey P. Stewart, 71, Manufacture and Repair, Main-

amount of handling to a minimum.

It is anticipated that 240 persons will be employed in this centralized plant on two shifts. Three hundred more will be on the portable units in the various branches, while the remainder will handle specialized depot work, extra priority shipments for overseas and the routine packing and shipping in the Supply Division.

Other changes will also be made in the Supply Division as a result of the correction control program. In turning over Bldg. 162 to the corrosion section, the Materials and Equipment branch is moving all materials from there to Section C of Bldg. 169. The equipment formerly stored in 169 will go to 1566.

Vancouver, Wash. (CNS) — Clarence Williams was bowled over by a speeding car. The driver then stopped, ran back, stole Williams' wallet and sped away.

tenance; Alva H. Vernon, 71, the Cylinder Reconditioning Section of Maintenance; James P. Brunson, 71, a saw filer, of Bldg. 166; David J. Edwards Sr., 70, Material and Equipment Branch of Supply; William H. Fisher, 71, of the Reclamation Section of Maintenance, and David R. Clary, 71, of Engine Repair Branch, Maintenance.

TYPICAL OF THE 19 WORKERS over 70 years of age whose attendance records were praised by Col. John A. Laird Jr., SAATSC Commanding Officer, is Clarence G. Chamberlain, shown at work in the Maintenance Division.

OFF WE GO

KEY—Mrs. Billye Cheatham Key, aged 24, died at a local hospital Saturday. She is survived by husband, Master Sgt. Jack C. Key, U.S. Army; son, Jeffrey Warren Key; parents, Mr. and Mrs. E. B. Cheatham; sister, Mrs. Geo. Baldwin. Arrangements when completed will be announced by Porter Loring Mortician.

For assistance in furnishing pictures and editorial matter for this volume and cooperation in numerous other ways, grateful acknowledgment is made to the Air Forces Division, War Department, Bureau of Public Relations, Washington, D. C.

Wings over America

The good fight which our air pioneers fought has been continued bravely and unselfishly by countless American Aviators. They have been willing and eager to fight and die, demonstrating the true efficacy of Air Power. With sober optimism it may be said of a war in which Air Power is the decisive factor, America Can Win, Must Win, and Shall Win ultimate victory. . . .

A R M Y A I R F O R C E S

FOREWORD

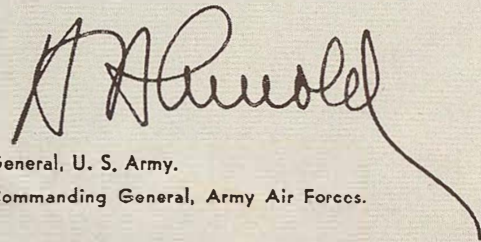

As members of the United States Armed Forces you do not have to be told of the magnitude and importance of the task that lies before you.

At every base, station and training field of the United States Army Air Forces you are preparing yourselves for the great test of arms which will prove that the forces of democracy can destroy the evil power of the totalitarian nations.

Soon you will take your places as Bombardiers, Navigators, Pilots, and Gunners alongside of our allies who have been fighting so valiantly. As mechanics and supply personnel, and in every type of ground duty, you will have the vital responsibility of making sure that our airplanes will be second to none.

We can win this war, and we will win it, but only if every officer and enlisted man puts forth all the fortitude and resourcefulness that Americans have always displayed in time of war.

There are trying times ahead, times that will test the mettle of all of us, but I am confident that the personnel of my command will acquit themselves with honor and distinction, no matter where and when we shall meet the enemy.

General, U. S. Army.

Commanding General, Army Air Forces.

GENERAL HENRY H.

GENERAL HENRY H. ARNOLD

Captain Beck, Lieutenant Arnold, Captain Chandler,
Lieutenant Milling, Lieutenant Kirtland.

A R N O L D

DEVELOPMENT OF THE ARMY

With the reorganization of the aviation setup of the United States Army, on March 9, 1942, has come the latest phase of the development of the nation's military aviation from its groping, experimental days to its present status as an autonomous unit within the structure of the Army. The story of the rapid growth of our nation's military aviation, from an unimportant subdivision of the Signal Corps before the first World War, through the period when it was a corps of its own, the Air Corps, and now to a degree of tremendous importance as the Army Air Forces, co-equal in prominence with all the other Army combat arms combined, is a stirring saga of courage and inspiration, of indomitable will and far-sighted genius, all within the short space of 33 years.

The utilization of aviation by the Army, however, antedates 1909, the official birth year. Civilian aeronauts made observations from captive balloons for the Army of the Potomac during the American Civil War, and later the Army purchased a balloon in France which was used in Cuba during the Spanish-American War. It was not, however, until the experiments of Langley, Maxim, Lillienthal, Bleriot, the Wrights and others had focused attention on the possi-

bilities of heavier-than-air machines that the Army considered seriously this newest military adjunct. It was not until the Wrights had demonstrated that a heavier-than-air machine was not only feasible, but practical that the Army advertised for bids for the construction of an airplane. An aeronautical division of the Army was created in the Office of the Chief Signal Officer of the Army on July 1, 1907.

The Wright brothers produced an airplane which was delivered to Fort Myer, Virginia, on August 28, 1908. It was a biplane with a wing spread of about 40 feet and a wing area of some 500 square feet weighing approximately 800 pounds. The lateral controls were affected by warping the wings. The double elevator and the rudder were supported in front of the wings by an outrigger. The landing gear consisted of two runners, or skids, and the plane was launched from a monorail. After a series of disappointing accidents and many tests, the Board of Officers appointed to examine the plane made a favorable recommendation on August 2, 1909, and the Chief Signal Officer approved the recommendation the same day. This date is considered the birthday of the Army Air Forces. While thus inaugurating

the air arm of the service on this date, the value of aircraft in a military way was not immediately apparent, particularly to a nation at peace, and it was not until March, 1911, almost two years later, that Congress for the first time specifically appropriated money for aviation . . . to the tune of \$125,000. By September, 1913, Army aviation had grown slowly until it had 17 planes, with a personnel of 23 officers and 91 enlisted men.

Inasmuch as the original conception of the role of aircraft in warfare was purely that of observation, the control of military aviation was left in the hands of the Signal Corps, and, indeed, aviation remained in this branch until 1918, when it was divorced from the Signal Corps and expanded into two departments—the Bureau of Military Aeronautics and the Bureau of Aircraft Production. Upon the termination of the war these two departments were consolidated into the Air Service. The first actual use of aircraft by the Army began in March, 1916, when the First Aero Squadron,

composed of 16 officers, 77 enlisted men and eight airplanes began operations with the Punitive Expedition in Mexico.

The World War, of course, with its constantly accelerating emphasis upon air power, was responsible for the rapid expansion of American aviation. By the time of our declaration of war upon Germany in April of 1917, Army aviation consisted of 65 officers (35 of whom were flyers), 1,087 enlisted men and 55 airplanes. No better commentary can be made upon the changing role of air power at the beginning of the World War and of the present conflict than to compare this number with the 10,697 officers, 126,660 enlisted men and 8,707 aviation cadets which we had on June 30, 1941, with the number constantly increasing under the impetus of the greatest expansion program in history.

During the first eight years of its existence, 1909-1916—a total of 142 airplanes had been delivered to Army Aviation. Congress, in July of 1917, appropriated \$640,000,000 for Army Aviation, the largest appropriation which had ever been made up until that time for any single purpose. Working as rapidly as possible, the country began the gigantic task of catching up in production with countries long at war. The first task was to train American flyers and for this purpose flying schools and ground schools were set up at a number of schools and colleges. Nearly 15,000 flying cadets received training in this country, and about 1,800 in Europe. By March, 1918, our Army Aviation strength was 11,000 officers and 120,000 enlisted men.

At the time of the Armistice we had 757 pilots, 481 observers, with 740 planes and 77 balloons at the front, and 1,402 pilots, 769 airplanes and 252 balloon observers had entered the Zone of Advance.

Major H. H. Arnold and Major T. D. Milling in 1912,
when Army air strength consisted of two planes.

While at the time of the Armistice less than 25 per cent of the planes flown by American pilots were of American manufacture, we were already beginning to swing into large scale production, principally of British designed DeHavillands and Handley-Page's equipped with the American Liberty motor, the greatest contribution of American manufacturers to the war effort. American aviators were officially credited with the destruction of 491 enemy airplanes, of which 462 were accounted for by 63 aviators. We had 43 squadrons at the front at the time of the Armistice. Following the conclusion of the war, our air strength was allowed to dwindle to 1,000 officers and 10,000 men.

The Army Reorganization Act of 1920 provided for 1,516 officers and 10,300 enlisted men for the Air Service, and the Air Corps Act of 1926 authorized a "Five Year Program" which contemplated at its conclusion a personnel strength of 1,650 officers and 15,000 enlisted men with 500 cadets, and equipment consisting of 1,800 serviceable planes. On March 1, 1935, the famous GHQ Air Force was established, embracing all tactical Air Corps Units within the Continental United States. Prior to its formation combat squadrons were trained under widely different methods, depending upon the conception of the Group Commanders. The purpose, which was accomplished, of the GHQ Air Force was to co-ordinate the systems of training so as to produce uniformity and the ability to operate together as a team. Another accomplishment was the later development of the combat crew as a fighting team. In practice, the same officers and men were assigned to the same airplane, and each team, through constant cooperation and practice, was able to attain a high degree of efficiency.

California.

Even more important than all these innovations, however, was the fact that the Air Corps, as it was known then, was, for the first time, under a unified command, and under an air officer, Major General Frank M. Andrews, later Lieutenant General, whose untimely death over the barren wastes of Iceland brought a major loss to the Army Air Forces. Here was another notable step toward the fullest development of our Army Air arm as an independently-functioning entity complete within itself.

This organization of air power into a highly mobile striking force of great unified power had, as its backbone, the function of Bombardment. The GHQ Air Force was divided into three Wings. The First Wing, with headquarters at March Field, California, comprised two Bombardment Groups, one Attack Group, and two Reconnaissance Squadrons. The Second Wing, with headquarters at Langley Field, Virginia, comprised two Bombardment and two Pursuit Groups, and two Reconnaissance Squadrons. The Third Wing, at Barksdale Field, Louisiana, was composed of one Attack and one Pursuit Group.

But even this organization was to be changed soon by the pressure of ever-increasing expansion of our Army Aviation. On June 23, 1941, the Army Air Forces was established. These included the Headquarters, Army Air Forces; the Air Force Combat Command (which superseded the GHQ Air Force), the Air Corps and all other air units. At the same time an Air Council was created to review and co-ordinate major Army aviation projects. The Air Council included Assistant Secretary of War for Air, Robert A. Lovett (ex officio), General H. H. Arnold, president of the council, Lieutenant General Delos C. Emmons, Lieutenant General George A. Brett, and the Chief of the War Plans Division of the War Department General Staff. In addition to his duties as Deputy Chief of Staff (Air), General Arnold

became Chief of the Army Air Forces. General Emmons was made Chief of the Air Force Combat Command, and General Brett, Chief of the Air Corps.

At the end of May, 1941, the Ferrying Command was organized to speed up the process of getting bombers to our English allies. Originally under the command of Colonel Robert Olds (later a Brigadier General in command of the Second Air Force at Spokane, Washington, now deceased), it is now commanded by Major General Harold L. George, and designated Air Transport Command. Since Pearl Harbor its activities have been vastly expanded into a huge world-wide organization engaged in the transport of all types of aircraft, plus supplies, equipment, and personnel to all the fighting fronts.

By the final reorganization, or "streamlining," which took place last March, the Air Corps ceased to exist, even as a purely administrative organization, and the Combat Command was eliminated, as well. The various combat Air Forces, which are complete units, of themselves, are now directly under the command of overall field commanders such as General MacArthur, another step forward in unified command. It is interesting to note that many of these field commanders, whose commands comprise all arms of the service, are themselves air officers, such as General Brett, in the Caribbean. Each Air Force is, of course, commanded by an Air Force Officer, of general grade, whether within the continental United States or overseas. These combat forces include all units of military aviation such as bombardment, interception (fighter squadrons), observation, and ground-air support, together with the necessary maintenance service.

As a result of the March 9 change, the Air Forces are recognized as one of the three elements of the Army, together with Ground Forces and Supply. This new organi-

zation, designed to simplify and speed up the chain of command, and to provide the flexibility and efficiency of operation necessary to accomplish the enormous task that lies ahead, designates General H. H. Arnold as Commanding General, Army Air Forces, and also as Deputy Chief of Staff for Air on the Army General Staff. By the same reorganization, Lieutenant General Joseph T. McNarney, one of the ablest American air strategists, was made Deputy Chief of Staff. In addition to these two officers, however, the Air Forces have a far greater representation than ever on the General Staff. As a matter of fact, the General Staff, as now constituted, is about one-half composed of officers from the Air Staff. The Air Staff, which is rather like a Staff within a Staff, and which is purely Air Forces organization, is similar in general outline to the General Staff, but on a slightly smaller scale.

The complexity and extension of Army aviation from its simple Signal Corps days until the present is no better illustrated than by a brief review of the various branches of the Air Forces. The overall picture of the Army Air Forces organization may be summed up under three key words: Policy, Commands, and Forces. The Policy function has already been discussed at the start of this article. It is handled by the Commanding General of the Army Air Forces and the Air Staff, plus the Air Forces' participation in the Army General Staff. In addition to the Assistant Chiefs of the Air Staff there is an Air Inspector, Air Surgeon, etc. Operating directly under the Commanding General of the Army Air Forces, eight great commands compose the

last stages of Air Forces preparation for combat units. It may be of great interest to outline the functions of these various Commands.

1. The TRAINING COMMAND.
2. The TROOP TRANSPORT COMMAND.
3. The AIR TRANSPORT COMMAND.
4. The MATERIEL COMMAND.
5. The AIR SERVICE COMMAND.
6. The PROVING GROUND COMMAND.
7. The ANTI-SUBMARINE COMMAND.
8. The FLIGHT CONTROL COMMAND.

1. The TRAINING COMMAND. While the Headquarters of the Air Corps Training Center began to function at Duncan Field, San Antonio, Texas, in 1936, flying training in the Army has been continuous almost since the purchase of the first Wright airplane in 1909. The first Army flying school was established at College Park, Maryland, in October, 1909. Lieutenant Frank P. Lahm and Frederick E. Humphreys were the first students of the Wright brothers. Lieutenant Lahm later became a Brigadier General and commanded the Training Center from its inception in September, 1926, until August 31, 1930. Among the first five Army aviators was Lieutenant H. H. Arnold, now a four-star General. Among them also was Lieutenant Benjamin D. Foulois, now Major General, retired. General Foulois became a Brigadier General at the age of 38 as Chief of the Air Service of the First Army, American Expeditionary Force. He became a Major General and Chief of the Air Corps on December 20, 1931.

The function of the Training Command is, of course, to coordinate and direct the immense job of providing officers and men for the vastly expanding Air Forces. In order to accomplish this with the greatest efficiency and to eliminate the possibility of administrative bottlenecks, General Arnold set up the Training Command as it now exists, under the command of Lieutenant General Barton K. Yount, with Headquarters at Fort Worth, Texas. The original plan called for separate air crew and ground crew training under two commands but, in order to integrate and streamline functions of training activities, the Flying Training and Technical Commands were consolidated under one command, calling for maximum efficiency with a minimum of staff personnel.

The nationwide program of the Command has been divided geographically into six subordinate commands—three Flying Training and three Technical Training. The Flying Training Commands are known as the Army Air Forces "Western Flying Training Command," "Central Flying Training Command," and "Eastern Flying Training Command." The Technical Training Commands are known as the Army Air Forces "Western Technical Training Command," "Central Technical Training Command," and "Eastern Technical Training Command."

All of these regional training areas are complete within themselves. Each Flying Training Command has its own College Training Detachments, Classification Centers, Primary, Basic and Advance Schools (for pilot trainees), Navigator and Bombardier Schools. The Flying Training Commands also provide for instruction in fixed and flexible gunnery and, as one of the later innovations, Glider Pilot training. Most of the flying schools are located in the

Captain C. Def. Chandler and Lieutenant Roy T. Kirtland in Wright B airplane with the first machine gun (Lewis) ever fired from a plane—1912.

Lieutenant H. H. Arnold in Wright B plane—1911.

Officers and Planes—N 13 Pursuit Squadron, Third Pursuit Group.

southern section of the regional areas where weather conditions are best for this particular type of training.

The Technical Training Commands are an outgrowth of efforts made during the early days of the first World War to train Army aviation mechanics systematically. State universities and civil technical schools were used then, but the system was a failure due to the large costs involved, as well as other reasons. Therefore, the Aviation Section, Signal Corps, established schools at St. Paul, Minn., and at Kelly Field, Texas. The Kelly Field school was discontinued after the armistice. In 1921 the school was moved to Chanute Field, Illinois, and in 1922 the Photographic School, at Langley Field, and the Communications School, at Ft. Sill, were consolidated with it. The school outgrew its area, and in 1935 another site was sought for a second school, which was established at Lowry Field, near Denver, Colorado.

The present expansion program of Army Aviation has necessitated the further expansion of the mechanic training program in order to provide the ever-increasing Air Forces with an adequate supply of trained mechanics, particularly in view of the fact that engines and equipment are constantly becoming more complex as well as progressively more modern. The Technical Training Command provides technical training for Army Air Forces personnel not trained by the Flying Training Command. Under this category comes not only ground crew personnel, such as mechanics

but also such air crew members, as the aerial engineer and communications officer.

2. The TROOP TRANSPORT COMMAND transports airborne troops and equipment, parachute troops and equipment, and tows troop- and cargo-carrying gliders.

3. The AIR TRANSPORT COMMAND, as discussed previously, is concerned with air transport, for military use all over the world.

4. The MATERIEL COMMAND. Experimental aviation activities, which were carried on at Washington by a few technicians prior to the World War, were concentrated at Dayton, Ohio, on November 5, 1917, under the command of Colonel V. E. Clark, Signal Corps. The laboratories, located at McCook Field, were supplemented by offices in Dayton. In 1926 the Air Service became the Air Corps and the functions of supply, procurement and maintenance of aircraft were added to this division, and the name changed to "Materiel Division." The location of the division was changed from McCook Field to Wright Field in 1926.

The Materiel Division has figured directly or indirectly in nearly all important aircraft developments, commercial as well as military. It is the great experimental and testing branch of the Air Force and includes, among its many accomplishments, superchargers, the "Whirlwind" engine, use of ethylene glycol for high temperature cooling, high octane gasoline, vibration control, metal propellers, night and instrument flying, haze penetrating film for aerial

photography, night and color photography, and many other developments.

5. The AIR SERVICE COMMAND operates air depots, repairs aircraft, and distributes aircraft, equipment, and supplies to air units in the United States.

6. The PROVING GROUND COMMAND operates proving grounds to test aircraft and equipment.

7. The ANTI-SUBMARINE COMMAND.

8. The FLIGHT CONTROL COMMAND.

AIR COMBAT

The various combat units have been formed into fourteen Air Forces, of which the first four are in the United States, the other ten overseas. Each of these Air Forces includes: 1. A BOMBER COMMAND. 2. A FIGHTER COMMAND. 3. A BASE SERVICE COMMAND, and 4. An AIR SUPPORT COMMAND.

It is quite probable that it is entirely too soon to attempt to define the role of the airplane in relation to the other combat forces of a nation. In spite of that fact there has been raging, and indeed still goes on, a debate between those who feel that air power has to a large extent superseded sea power and even land power as the deciding element in modern warfare, and those who feel that this extreme theory has yet to be supported by actual facts. There are extremists who argue, like the Russian designer Seversky and the Italian General Douhet, that the day of the surface fleet is over, and that the future wars will be decided by the relative merits of the air forces of the combatants. On the other hand, we have the sure evidence of the failure of bombing alone either to permanently disrupt the war effort of a country or to terrorize its civilians into demands that its government surrender. In neither the Spanish Civil War nor in this war, up until the present, has it been possible for the advocates of air power alone to prove their contentions.

At the same time it must be granted that no nation has as yet been able to mount the type of air attack envisioned

ARMY PLANES 30 YEARS AGO

Shown above is a Morane Roulier, the first plane used by American aviators in World War I (1918). Below is a Wright airplane, the first plane in Philippine Islands at Fort McKinley (1912)—piloted by Lieutenant Frank P. Lahm.

AMERICAN PLANE—WORLD WAR I

by those who hold that it will be air power that will decide the war. It seems likely, however, that this theory will be given a thorough test before the war is done.

Certainly it is true that the conception of the airplane has already undergone a remarkable series of changes since the beginning of the World War, when it was regarded not in the light of a combat weapon at all. Indeed the first airplanes used in the World War were almost always of one type, a two-seater designed for reconnaissance work. As the war progressed specialization appeared and a class of airplanes designed first for air fighting, then for bombing, appeared. Several nations, prior to the war, had experimented with the arming of aircraft with machine guns, but on the outbreak of the war no plane on the front was so armed. Rifles, carbines, pistols, and hand grenades were carried by the pilot and observer. The tactics of air fighting were rudimentary. The pilots simply flew close to the enemy and when within range the pilot and the observer blazed away with any weapon they happened to have handy.

In the summer of 1915, belligerents began to mount machine guns in the planes, usually on a swivel bar at the back of the observer's seat. The observer could only fire the gun backwards toward the tail of the plane, firing over the pilot's head, which made for a very restricted zone of fire. This necessitated that in order to fire on an opponent, the plane had to fly away from the enemy, thus making it very difficult to be effective. The British experimented with a type of plane in which the gun was mounted in the front and the motors faced the rear. This type gave the advantage of frontal firing, but was so slow on climbing and flight that it was abandoned within a short time.

The first real fighting aircraft to make its appearance was the German Fokker monoplane. Fast, maneuverable, and of the tractor type, the plane had a machine gun mounted in such a fashion as to synchronize with the revolutions

of the propeller, thus allowing it to be fired straight ahead. The pilot aimed the gun by aiming the airplane. This plane was so obviously superior to those of the Allies that command of the air passed to the Germans throughout the rest of the year. In 1916, however, the British were able to challenge the Germans by producing their own type of front-firing plane, although it was not until near the end of 1916 that the Allies were able to produce machine gun mounted planes of the Fokker type. The success of the Fokker airplane was responsible for the advent of formation flying. Casualties among the French and British had grown so heavily that individual flights were discontinued and flights of three or more planes took their place. The Germans retaliated, and by the end of the war patrols were the accepted form of air tactics.

It early became apparent to air-minded officers that great damage could be inflicted upon the enemy by dropping bombs from aircraft on his troops, ammunition dumps, factories and other military installations. Indeed, many of the early fighters attempted some rudimentary bombing flights, using hand grenades. These were usually ineffective except in rare instances. Bombs were then devised which could be dropped from the plane. In early bombing raids the bombs were carried in the cockpit of ordinary fighter planes and heaved over the side by the observer whenever he judged himself to be in a position to hit his target. This was a clumsy, inaccurate system, however, that soon led to the design of an entirely different craft made for bombing alone, and equipped with machine guns for protection. These planes, which were growing larger and larger as the war progressed, were equipped with bomb racks controlled by mechanisms within the bomber, and carried crews of from three to six men. They were utilized at first as lone raiders, depending on stealth and surprise to accomplish their tasks, but by 1917 there had evolved

Wright machine; with P. Parmalee and Lieutenant M. S. Crissy with first explosive aerial bomb.

the system of formation attacks by squadrons of bombers escorted by fighter planes as a protective screen. The Germans used this system first to great advantage, and by concentrating very large flights were able not only to concentrate the power of the bombing assault, but have enough fighters to sweep the skies of the opposition.

In addition to the duties of Reconnaissance, the original role of the airplane, had been added the duty of patrol, straffing and bombing, with the Bombardment arm always tending to become more and more important. After the war the Air Services of all countries began to experiment more and more with the development of bombing planes of increased power and destructive ability. It was realized that

it was increasingly possible for planes to inflict very heavy damage on the enemy from the air. The development of bombsights by all the major powers was to a large degree responsible for this. The American bombsight was recognized as being probably the most accurate of any developed in this period. Accuracy in hitting a predetermined target was coupled with increased altitude which made the planes more safe from enemy fighters and antiaircraft attack. Increased speed and range of the planes has developed down until the present time, when every belligerent possesses bombers capable of flying immense distances with heavy bomb loads.

The United States was among the first to develop the art of dive bombing, wherein the plane is pointed downward at the target and releases its bomb very low, depending upon the tremendous speed of the dive for protection. The dive bomber is very accurate inasmuch as the pilot has the target before him on the way down and does not release his bombs until just above it. It remained for the Germans to develop this to the highest, and it was employed with great success in the battle of France. Many military experts say that the Stuka dive bomber is the greatest single contribution of the war to air combat. The Germans also experimented with and developed the use of air-borne soldiers, utilizing the parachute, originally a safety device, as an instrument for the dropping of offensive men behind the enemy lines. The Russians also have used this extensively, and paratroops are now a part of every belligerent Army.

Troop transports capable of carrying many men, supplies and equipment have also been developed, and in the battle of Crete the Germans used air-borne troops to carry the brunt of the battle.

The Japanese and the British have both added chapters to the development of air combat by the use of the torpedo-carrying planes as an effective weapon with which to attack enemy warcraft which are not heavily protected by fighter planes. The English at Taranto and the Japanese at Pearl Harbor and off Malaya demonstrated that unprotected warships can be sunk with relative ease by planes of this type unless they are in turn protected by fighter planes based either on land or on accompanying aircraft carriers.

The day of the spectacular individual air "ace" has apparently closed, as pilots are taught more and more to fly and to fight in absolute formation. Formations are increasing in size as the strength of the warring nations in the air continues to grow.

There has been a growing belief on the part of military men that the day of air power in combat is only begun, and that this war will produce innovations and changes equally as great as those produced in the World War. It is certain that each day, all over America, more and more fighters, bombardiers, navigators, observers, gunners, me-

chanics and technicians are being trained for whatever role shall be assigned them in America's growing air armada.

CHIEFS OF THE AIR CORPS (Now Army Air Forces)

During the World War, Army Aviation was divided into the Bureau of Military Aeronautics, directed by Major General William L. Kenly, and the Bureau of Aircraft Production, directed by Mr. John D. Ryan, the copper magnate. With the advent of peace, these bureaus were consolidated under one title—Air Service—under the command of Major General Charles T. Menoher, who had commanded the 42nd (Rainbow) Division overseas.

On October 4, 1921, General Menoher was succeeded by Major General Mason M. Patrick. He remained in command until his retirement on December 13, 1927, and was succeeded by Major General James E. Fechet, who served until his retirement in 1931.

Major General Benjamin D. Foulois served for four years until December, 1935, when he was succeeded by Major General Oscar Westover, who served until his death in a flying accident in 1938. At that time Major General (now General) H. H. Arnold took over, and to him has fallen the immense task of directing the Air Forces through the present period of war.

ARMY AIR FORCES ACCOMPLISHMENTS

PRE-PEARL HARBOR

From the end of World War I to the start of World War II, the Air Forces have pioneered in numerous aviation activities. A few of these flights and activities, chronologically arranged, are as follows:

- 1920—February 27. Major Rudolph W. Schroeder established a world's altitude record of 33,000 feet.
- 1921—February 12. The Army Air Service successfully completed a Washington, D. C., to Dayton, Ohio, flight.
- 1921—September 1. The Army Air Service successfully completed a total of 396 forestry patrol flights in the Northwest.
- 1922—October 6. Lieutenants Oakley G. Kelly and John A. Macready established a world's endurance record of 35 hours, 18 1/4 minutes.
- 1922—October 18. Brigadier General William Mitchell established a world's record for speed over a measured 3-kilometer course of 224.38 m.p.h.
- 1922—November 4. Lieutenants Kelly and Macready established a world's record for distance with a flight of 2,060 miles, from San Diego, California, to Fort Benjamin Harrison, Indiana.
- 1923—April 3. Six Army land planes completed a flight to Porto Rico and return.
- 1923—April 19. Marooned inhabitants of South Fox Island, off the coast of Michigan, were afforded relief through the dropping from Army planes of food and clothing.
- 1924—March 17. Four Army Douglas World Cruisers departed on an aerial journey around the world. Two of the planes successfully completed the flight of 27,550 miles in 175 days.
- 1925—November 20. Lieutenant George W. Goddard, Air Corps, made the first successful night aerial photograph.
- 1926—April 19. The first maneuvers involving the entire Air Service were held at Fairfield, Ohio, in which a total of 45 officers and 67 enlisted men participated, utilizing 44 airplanes.
- 1927—May 2. The "Good Will" flight returned from South America, after covering a distance exceeding 20,000 miles since December 21, 1926.
- 1927—May 4. Captain Hawthorne C. Gray, Air Corps, in a free balloon, reached 42,470 feet, the highest altitude ever attained by man up to that time.
- 1927—June 29. Lieutenants Lester J. Matland and Albert F. Hegenberger, Air Corps, landed at Honolulu, Hawaii, after having spanned 2,400 miles over the Pacific Ocean from Oakland, California.
- 1928—June 30. Captain William E. Kepner and Lieutenant William D. Eareckson, vice, representing the Air Corps in the International Free Balloon Race, won first honors, giving the United States permanent possession of the Gordon Bennett Trophy, since it marked the third consecutive time American aeronauts won this trophy.
- 1929—August 31. Captain Albert W. Stevens, Air Corps, photographed Mt. Rainier from an airplane which was at a distance of 27 miles from this mountain, exceeding by 50 miles any previous record in long-distance aerial photography.
- 1929—September 24. Lieutenant James R. Dugan, Air Corps, in a public demonstration of "instrument flying," accomplished a take-off and a landing solely through the use of instruments, for which he received the International League of Aviators Trophy.
- 1930—June 26-27. Randolph, San Antonio, Texas, Headquarters of the Air Corps Training Center, was dedicated.
- 1931—May 18-30. The annual Air Corps Field Exercises began at Dayton, Ohio, and ended at Washington, D. C. The Atlantic seaboard from Maine to Virginia was covered. The First Air Division participated, comprising 592 officers, 69 flying cadets and 643 enlisted men. A total of 861 airplanes of all types was utilized in these exercises.
- 1932—May 9. Captain Albert F. Hegenberger accomplished the first solo flight entirely by instruments.
- 1933—Master Sergeant Ralph W. Bottrill, of Kelly Field, Texas, was presented the Distinguished Flying Cross for having made the first jump from an Army airplane with the free type parachute, in May, 1919. It was as a result of Sergeant Bottrill's pioneering that the Air Corps developed the present type of parachute.
- 1934—December 27. The Secretary of War approved the GHQ Air Force organization, and Lieutenant Colonel Frank M. Andrews, designated as its first Commander, was appointed a Major General.
- 1935—March 1. The GHQ Air Force was officially organized.
- 1935—August 29. Air Corps engineers made the first flight using the radio compass to control the automatic pilot and thus providing automatic radio navigation.
- 1935—November 11. Captains Albert W. Stevens and Orvil A. Anderson, Air Corps, reached 72,395 feet in the stratosphere balloon.
- 1935—December 27. Army bombers scored direct hits on the lava flow from the Mauna Loa volcano in Hawaii which was menacing the city of Hilo. The bombing tended to divert the lava flow to other channels.
- 1936—March. The Second Bombardment Group of Langley Field, Virginia, dropped 8,000 pounds of food and medical supplies to communities in Pennsylvania isolated by flood waters. A total of 45 officers and 100 enlisted men participated in these relief missions, utilizing 30 airplanes.
- 1936—February 10. Major Barney M. Giles, Air Corps; Second Lieutenant J. H. Patrick, Air Reserve; Staff Sergeant D. E. Hamilton and Corporal Frank B. Connor, Air Corps, took off from Concord, New Hampshire, about midnight and located seven CCC youths marooned on drifting ice in Cape Cod Bay. Major Giles circled over the party to show their position to Coast Guard personnel and other planes, which dropped food and blankets. Each of the four airmen received the Distinguished Flying Cross.
- 1936—June 29. Major General Frank M. Andrews, made a non-stop distance record for amphibian planes by piloting the Douglas OA-5, 1,425 miles from Porto Rico to Langley Field, Virginia, in 11 hours and 9 minutes.
- 1937—August 5. The Air Corps substratosphere plane, the Lockheed XC-35, made its initial performance flights at Wright Field, Ohio. Being equipped with a supercharged cabin, oxygen equipment was unnecessary.
- 1937—August 23. Captains Carl J. Crane and George V. Holloman, Air Corps, and Mr. Raymond K. Stout, Project Engineer, all of Wright Field, made two entirely automatic landings under adverse wind conditions.
- 1938—April 20. Four officers and five enlisted men began instruction under adverse wind conditions.
- 1938—February 15-27. Six B-17 bombers flew from Langley Field, Virginia, to Buenos Aires, Argentina, and return. The trip south involved landings at Miami, Florida, Lima, Peru, and Guano Aires. Returning, landings were made at Santiago, Chile, Lima, and Albrook Field, Panama Canal Zone.
- 1938—April 14. During a period of four days, all food, grain and supplies necessary for a Cavalry detachment of 30 men and 30 horses were dropped from an airplane in the mountains of the Big Bend District in Texas.
- 1939—February 4-6. Major D. V. Haynes, Air Corps, with a crew of 10 officers and men, flew the XE-15 bombardment plane from Langley Field, Virginia, to Santiago, Chile, with a load of vaccines and other medical supplies, totaling over 3,000 pounds, needed for earthquake sufferers. The distance of about 5,050 miles between Langley Field and Santiago was accomplished in 49 hours, 18 minutes elapsed time, and in a flying time of 29 hours and 53 minutes.

All day and through the night, while a nation sleeps, the light cargo ships and heavy bombers soar aloft to complete their missions. Whenever a mission is completed, whether it is carrying freight across America or bombs across Europe, that plane must return to be gassed, checked, repaired or overhauled. Alert crews of the Air Service Command maintain around-the-clock service to keep the mighty war birds flying.

ARMY AIR FORCES AIR SERVICE COMMAND

GREETINGS

To the soldiers and civilians of the Air Service Command has fallen one of the most difficult assignments in the Army Air Forces. Our job is to send aircraft and supplies to the Army Air Forces wherever they may be and, once there, through maintenance, to keep the American Eagle's wings where they belong—in the air. We are doing that job.

We are now an inseparable part of every phase of Army Air Forces operation—doing our part on every front where there are American airmen. Wherever an American plane flies, we have sent materials to keep it flying; we have repaired it when repairs were necessary; we have trained the men who service it.

Victory in the air war is in large measure a matter of transporting the hundreds of thousands of spare parts required in modern aircraft to the battlefronts 'round the world in the proper portion, and using them to keep our aircraft in fighting trim. It is a job calling for the hardest work, the deepest devotion to duty, unquenchable initiative. Every person connected with Air Service Command, officers and men, soldiers and civilians, is making, I know, his contribution to this over-all objective faithfully and with honor.

A handwritten signature in dark ink, appearing to read 'H. H. Rank', is written in a cursive style.

Major General, U. S. A.

Commanding General

Army Air Forces Air Service Command

WALTER H. FRANK

MAJOR GENERAL, U. S. A.

Commanding General, Air Service Command

Major General Walter H. Frank, Air Corps, Commanding General of the Air Service Command, became affiliated with Army aviation more than 25 years ago, as a Captain of Infantry; he accepted appointment as Major in the Aviation Section, Signal Corps, on November 4, 1917, and was assigned to duty with the Training Brigade at Kelly Field, San Antonio, Texas. However, the General's military career had started some years prior to his beginning as an aviator. Incidentally, since joining the predecessor of the Army Air Forces during the first World War, the General has earned the ratings of Command Pilot, Combat Observer, and Technical Observer.

General Frank was born at Humphrey, New York, April 23, 1886. His graduation from the U. S. Military Academy on June 10, 1910, and his appointment as a Second Lieutenant of Infantry was followed by his assignment to duty at Plattsburg, New York, where he performed company, battalion, and regimental duty until August, 1913. For the next two years he was stationed at Madison Barracks, New York, following which he served a tour of duty for three years at Schofield Barracks, Hawaii.

Upon his return to the United States, General Frank was stationed on the Mexican Border for several months, and he was then assigned as student at the School of Arms, Fort Sill, Oklahoma, where he remained until his transfer to the Aviation Section, Signal Corps. He received his promotion to First Lieutenant July 1, 1916; to Captain, May 15, 1917; and to Major in the fall of 1917.

General Frank's stay at Kelly Field was brief, for on November 22, 1917, he entered upon his duties as Executive Officer at Ellington Field, Houston, Texas. He served as Commanding Officer of this post from July 19 to November 5, 1918, in the meantime taking the regular course of flying training. He passed the required flying tests and received the rating of Junior Military Aviator, effective August 29, 1918.

His administration of the Bombing and Gunnery School at Ellington Field brought him high commendation from the Chief of Air Corps.

In December, 1918, General Frank was transferred to duty in Washington and assigned as Executive of the Training Section, Office of the Chief of Air Corps. From June to August, 1919, he was placed in charge of an extensive Air Service Campaign, the success of which attested to his high executive ability. For several months he served as a member of the Advisory Board, and in November, 1919, he was detailed as a student at the Air Service Engineering School at McCook Field, Dayton, Ohio. Following his graduation on September 15, 1920, he returned to Washington and was on duty in the Office of the Chief of Air Service as Acting Executive Officer from October 10, 1920, and as Executive Officer from November 29, 1921, to September 22, 1924.

Assigned to duty as student at the Air Service Tactical School at Langley Field, Virginia, General Frank was graduated in June, 1925, and from the Command and General Staff School, Fort Leavenworth, Kansas, in June of the following year. He continued his connection with school work, being assigned as Assistant Commandant of the Air Corps Tactical School, and he performed this duty as well as that of instructor, until his detail as a student at the Army War College in August, 1930. His graduation from this institution in June, 1931, was followed by a period of duty for four years in the Plans Division, Office of the Chief of the Air Corps.

On August 17, 1934, he was assigned to the Command of Mitchel Field, L. I., New York, and of the Ninth Observation Group. He was promoted to Lieutenant Colonel January 1, 1935.

By the time America entered the second World War, General Frank's high professional attainments and experience in connection with Air Corps maneuvers and tactical functions were being used to good advantage in the Air Corps and in July, 1942, he was named Commanding General of the Air Service Command in the European theater of operation. After directing the establishment of important maintenance and supply installations in England, the General was ordered to the United States to become Commanding General of the Air Service Command.

General Frank has served in an executive capacity in various Air Corps maneuvers, and the manner in which he performed his duties brought him high commendation from his superiors. On numerous occasions he delivered lectures dealing with the tactical functions of the Air Corps, which also brought forth expressions of high praise.

HISTORY OF THE AIR SERVICE COMMAND

Air Service Command is the largest of the nine commands in the Army Air Forces, and rightfully so because it is tackling the largest job in the pattern of Victory. Air Service Command's mission is to supply and maintain United States military airplanes wherever they are in use the world over to "Keep 'Em Flying."

Predecessor of Air Service Command was the "Field Services Section" of the Engineering Division of the Air Corps, organized in 1919. The Command's formal history began with the formation of the Provisional Air Corps Maintenance Command, under the Materiel Division, on March 15, 1941. On April 29, 1941, this name was changed to Air Corps Maintenance Command and the unit remained under the jurisdiction of Materiel Division.

On October 17, 1941, the rapidly expanding outfit was given the name of Air Service Command—its almost unlimited scope of service thus appropriately recognized. As a separate command, ASC became a component of Army Air Forces in the Army reorganization of March 9, 1942.

From such humble beginnings, the Air Service Command has grown to its present size wherein it exceeds America's largest industrial corporation in volume of business done, in number of employees, and in the amount of space required to perform its operations. The world struggle for air supremacy, on which victory hinges, has brought about this military reorganization unique in the annals of the United States Army.

First Commanding General of ASC was Major General Henry J. F. Miller, who was transferred to the European Theater of Operations in November, 1942, and replaced by Major General Walter H. Frank, who organized Air Service Command functions in the combat zone during the period July-November, 1942.

General Frank's assumption of command brought far-reaching streamlining of Air Service Command operations, characterized notably by the application of proved American industrial-management methods to the operation of Air Supply and air maintenance duties.

Air Service Command accomplishes its mission through the medium of 11 "Area Commands" in the continental United States, and through mobile organizations known as Air Depot Groups, Service Centers, and Service Groups in the overseas theaters of operations.

Each Area Command is determined by the location of a control depot, and in turn this control depot has a network of specialized depots in its geographical jurisdiction. The control depot cities are: Rome, New York; Middletown, Pennsylvania; Fairfield, Ohio; Warner Robins, Georgia; Oklahoma City, Oklahoma; San Antonio, Texas; Ogden, Utah; Spokane, Washington; Sacramento, California; and San Bernardino, California. It also provides Air Force Technical Supplies to a maze of AAF Base Supply and Maintenance Sections, formerly known as sub-depots.

This modern building houses the heart and brains of the Air Service Command. From its busy offices go directions and plans for the successful operation of depots and sub-depots set up at strategic points across the country and in theaters of operation overseas. Here, the men and women soldiers-in-muffti do their part in the big business of Keeping 'Em Flying.

Twenty-four hours a day there is a steady flow of traffic in and out of repair hangars as ships of all types are serviced by skilled mechanics of the Air Service Command. Puddle-jumpers, trainers, cargo ships and bombers receive equal and careful attention from the home front soldiers in overalls who keep 'Em Flying.

Here, in summary, is what the Air Service Command does:

1. It furnishes supplies for all Army Air Force airplanes throughout the world.
2. It repairs, overhauls or rebuilds these same planes, here and overseas.
3. It trains the personnel required for the supply and maintenance jobs.
4. It processes (prepares for shipment) all American and Lend-Lease planes for shipment overseas.
5. It gives final inspection to and makes any needed changes or repairs on all American planes flown overseas.
6. It makes final inspection of Lend-Lease planes consigned to South and Central American countries and furnishes supplies, routes and other assistance for the flight from this country to each plane's destination.

The heart of the Air Service Command is its supply system through which our fliers and planes all over the world get the supplies they need. Bolts and bombers, bullets and bombs, fuel and lubricants, flying suits and jungle kits, radio sets and medical supplies—all are made available by Air Service Command to our Air Force combat units wherever they are found.

The minute an Air Force plane leaves the factory it "belongs" to the Air Service Command—that is, from then on it is the job of ASC to keep it in fuel, bullets and bombs, and repair.

The function of the Maintenance Division is to keep planes in combat condition. The lives of our fliers and the effectiveness of our planes depend in large measure on how well the Maintenance Division of the Air Service Command does its job.

"We are the garage mechanics of the Army Air Forces," said Major General Clements McMullen, Chief of the Division. "Without the services of our men and machinery, a plane could operate only so long as nothing serious went wrong with it. In combat, that wouldn't be very long."

Air Service Command mechanics not only restore damaged planes to their original condition; they also make improvements on them. This is called modification, and consists of altering a plane as a result of combat experience. Modifications are intended to fill the gap between the time the Army Air Force decides on an alteration and the time the factory can put the change into effect. Perhaps a section of plane is found to be too vulnerable to enemy fire; that is corrected by installing guns in a certain spot. Or the armament already there may be of insufficient striking power so the machine gun is replaced by a cannon. Again a certain

type of plane, such as a P-38, is found ideal for photographic missions, whereupon machine guns are removed from a certain section of the plane and cameras are installed in their place. Thanks to these modifications, the enemy frequently is caught off guard.

While the daring deeds of our fliers have been told over the radio and in the press, very little is known outside the Air Service Command's own ranks of the long hours of toil and hardship put in by the men on the ground in order that the men in the air may carry out their mission in top-conditioned planes.

It is the job of the Personnel and Training Division to supply and train the men and women who operate the Supply and Maintenance Divisions and the other activities of the Air Service Command.

The enlisted men and officers constituting the military personnel of ASC are furnished through Selective Service and the War Department. Consequently, supplying that part of ASC's personnel presents no difficulty.

Air Service Command's training program falls into two broad classes—for its civilian and its military personnel. Civilians are trained for work in this country; the military for work in combat zones. The two groups are trained separately, and their training is different.

The soldier-mechanic in a combat zone isn't likely to be working in a large concrete or steel repair shop where supplies and equipment are abundant, where the plane to be worked on is brought right to the worker, and where the worker has only his single special job to perform. As likely as not, the overseas soldier-mechanic may have to help locate a plane that crashed not far behind the enemy line. When he finds it he must be careful that booby traps have not been planted in it. He must get the plane aboard a wrecker and hauled to where it can be worked on, at the same time he keeps on the alert for snipers and enemy action. He may have to make repairs in a truck hidden under a tree. If no trees can be found, he may have to help put up camouflage to protect the plane, truck and squadron during repairs.

Our Army operates on the very sound premise that if a man cannot do his job in training, he certainly will not be able to do it in combat. To prepare personnel for their battle tasks, then, soldiers of ASC undergo a rigorous six-month training program. Only then are they ready for the objective toward which all military activity is aimed—direct operations against the enemy.

There are two periods of this training: the activation and unit training period and the combined training period.

During the first period a cadre of experienced officers and men is assembled at a base unit of the ASC. It received special training in how to build the new organization at the Air Service Command school, WRASC, Warner Robins, Ga., after which it proceeds

to the field where the new unit will be activated.

Here the organization is brought to full strength in accordance with the appropriate table of organization, by the addition of personnel processed through ASC Replacement Depots. To supplement basic military training received upon entrance into the Army, the enlisted men undergo brush-up courses. There is instruction in how to live in the open, how to build a latrine, how to protect oneself against gas attack, how to use small arms, and many related subjects. Men complete necessary medical and dental treatment. Those disqualified for duty overseas are weeded out and replaced. Courses of instruction, begun in various technical schools in such subjects as mechanics, parachute repair, welding, and other subjects, are continued. At the conclusion of this period, the unit will have sufficient training so that it can be self-sufficient and is able to conduct its primary mission as a well-integrated organization.

During the combined training period, the unit works with a combat organization and learns precisely what it must do to service this outfit. This is done under simulated battle conditions, with emphasis on camouflage, dispersion, concealment, bivouac, and movement. The organization is molded into a compact, thoroughly schooled outfit, *arin' to go*.

Thus, our mechanics, when the time comes, know precisely how to get their planes in tip-top shape for combat missions, whether bombing forays or fighter escort duty or low strafing attacks on enemy troops.

To teach officers how to set up shop in theaters of operations overseas the Air Service Command conducts a postgraduate course at the Warner Robins depot, Macon, Georgia. A large sand table shows the layout of a complete ASC set-up in a theater of operations. When the "shove off" order actually comes, each unit commander knows how to handle the thousand and one things necessary to move men, supplies and equipment to a distant post.

Repairing the damaged wing of a B-17 bomber in Middle East.

View of an assembly area of a South Pacific base where P-38 and P-39 fighter planes are put together.

They know how to locate a downed plane, and, either salvage every usable scrap from it or get it back to a base where it can be returned to fighting trim. They know how to remove and replace a faulty engine, patch up a flak hole in a wing with a tin can, straighten out a bent propeller blade so that it can be used again.

At the end of the six-month period, the organization is ready for action. Then it's off to the staging area and overseas. There's plenty of action after that.

An air depot group corresponds to a main depot in this country. It is more or less a permanent installation and is located from 400 to 1,200 miles behind the lines. It is the supply base for the Army Air Forces for an entire theater of operations. Repair shops are equipped to do major overhaul jobs.

About midway between the depot group and the enemy line are the service groups, which correspond to sub-depots in this country. A service group serves as a supply base for the mobile units or squadrons which fan out from it, and its camouflaged repair outfit is equipped to handle all but major overhauls.

The mobile units or squadrons operate only a few miles behind the line and are intended to furnish emergency service to Air Corps planes and fliers. Each mobile unit consists of from 12 to 20 men, each a specialist in his field. Some are welders, some sheetmetal workers, some machinists, some aircraft mechanics, and so on. The unit is trained to work as a team, the same as a bomber crew.

Army Air Forces and Lend-Lease planes from this country are flown overseas or shipped stripped down or crated. The Air Service Command has a hand in all three methods.

Bombers are flown from factory to a jumping-off place in this country where they are refueled and given a final check-up by ASC mechanics.

Some fighters have been flown across, but because of the limited gasoline capacity of a fighter and the strain on the pilot to fly and navigate without the aid of a crew, this has been done only in an emergency or to gain experience. Fuel requirements can be met by fastening an auxiliary tank (belly tank) to the under side of the fuselage which is released when the tank has been drained.

As a rule fighters are shipped across. Some are crated at the factory and addressed and put aboard ship at the port of embarkation by the Air Service Command. Most fighters are stripped down at an ASC embarkation depot and then put aboard ship. Air Force commanders overseas prefer to receive the planes stripped down because they can be made ready for combat in less time than planes that have been crated.

The Air Service Command overseas ports not only process all fighter planes sent overseas, but also handle all plane parts and Army Air Forces supplies and equipment shipped overseas.

Not all of our Lend-Lease planes leave the Western Hemisphere. Many of them go to the other American republics. Most of these planes are trainers. There are also some combat planes. They are flown by Air Transport Command from the factory to San Antonio, Texas, where Air Service Command takes them over.

ASC workers paint on the planes the insignia of the country to which they are going, give the planes a final check-up and make necessary changes, and then turn them over to the accredited representatives of the country of destination who arrange for the personnel to fly them away.

Air Service Command furnishes the fliers with spare parts they may need along the way.

HEADQUARTERS SAN ANTONIO AIR SERVICE COMMAND

K E L L Y F I E L D , T E X A S

HEADQUARTERS
SAN ANTONIO AIR SERVICE COMMAND

Office of the Commanding General

KELLY FIELD, TEXAS

To the Military Personnel of the SAASC:

Now well into the third year of the war, with big accomplishments in the background and even bigger things in the offing, I think it fitting that I take this opportunity to urge each of you to greater efforts.

We, of this command, can well be proud of what we are doing to speed this war to a successful conclusion. The San Antonio Air Service Command has consistently performed not only the duties expected of it, but more as well. We are in no position, however, even if we were so inclined, to rest on our laurels at this point.

The all-out invasion of Hitler's European Fortress is imminent, and each day's developments in the Pacific theatre demonstrate that we are fighting more than a war of attrition. The men of the Air Service Command, in general, and the SAASC in particular, must continue as never before to labor mightily to "keep 'em flying." Take pride in the knowledge that you are a part of the mainstay of the world's greatest air force.

When the war is won, and your days as a soldier in the SAASC are only a memory, this book will provide you with a fitting memento. I am happy to commend it to you, and with it to send my personal greetings to each member of this command.

PAUL S. BLAIR

COLONEL

Commanding Kelly Field Army Air Base

Born in Sparta, Illinois, 4 September 1907. Graduated from Sparta Township High School and attended Monmouth College, Monmouth, Illinois.

Graduated from Air Corps Technical School, December, 1927 (Photography), and rated airplane pilot upon graduation from Air Corps Advanced Flying School, February, 1933 (Bombardment).

Entered Air Corps as enlisted man, 1927; commissioned Air Reserve, 1931; served as enlisted pilot (Staff Sergeant), later appointed Warrant Officer.

Called to active commissioned duty, accepting reduction in rank to Second Lieutenant, Reserve, upon entering on active commissioned duty at Duncan Field, 10 September 1937.

Has served at the following stations: Chanute Field, Dodd Field, Brooks Field, Randolph Field, Duncan Field and Kelly Field, in addition to short tours on DS in Central and South America and AAF, Hq., Washington, D. C.

Colonel Blair assumed command of Kelly Field Army Air Base on 28 April 1943, after serving at all Air Forces Stations in San Antonio.

ALFRED O. SAENGER

LIEUTENANT COLONEL

Chief, Supply Division

R. O. T. C. at Texas A. and M. College, 1928-1932, graduating with Reserve Commission in Cavalry Reserve.

Various two-week tours of active duty in Cavalry Reserve at Fort Clark, Texas.

Called to active duty in Air Corps in June, 1941, as First Lieutenant at Army Air Base, with assignment of Assistant Air Corps Supply Officer.

Attended SAAD Supply Officer course at Duncan Field in November and December of 1941, and returned to initial assignment at Tucson.

Transferred from Fourth Air Force to Air Service Command in April, 1942, shortly after Tucson Air Corps Supply was converted into a Sub-Depot operation, with assignment of Assistant Sub-Depot Supply Officer. Promoted to Captain at same time.

On Detached Service to Alamogordo, New Mexico, to activate and initiate operation of Sub-Depot Supply installation at that Air Base in May, 1942, returning to Tucson in June.

On Detached Service to Marana, Arizona, to activate and initiate operation of Sub-Depot Supply installation at that Air Base in July, 1942, returning to Tucson in August as Sub-Depot Supply Officer.

Transferred to Pyote, Texas, in October, 1942, as Sub-Depot Commander, to activate Sub-Depot at that Air Base. Promoted to Major.

Transferred to SAASC in October, 1943, as Chief, Control Section of Supply Division.

Assigned as Chief, Supply Division in November, 1943. Promoted to Lieutenant Colonel.
